

# Calcium Nitrate Concentrated with boron Solar Ca-B

$\text{Ca}(\text{NO}_3)_2 + \text{B}$   
 17N +32 CaO + 0.3 B

The only concentrated source of water-soluble calcium is now with boron. A high concentration of calcium increases the storability and improves the quality of the resulting products. Microadditive boron additionally stimulates flowering and fruiting of agricultural crops. Ideal for light-graded soils (sandy, sandy loam and light loam).

**Recommended for fertilizing and fertigation of the following crops:**  
 sugar beet, sunflower, potatoes, vegetables, flax, cotton, apricot.

Appearance	White or greyish-white granules
Total Nitrogen (N), min	17 %
Calcium and Magnesium Nitrate in term on CaO, min	32 %
Boron (B), max	0.3 %
Moisture, max	3 %
Granulometric composition:	
under 1 mm, max	5 %
1–4 mm, min	90 %
under 6.3 mm	100 %
Granule static strength, min	2 MPa
Free Flowing	100 %

## Packaging, transportation and storage

25 kg bags (palletized), in Big bags 500 and 1000 kg.  
 Transport and storage shall comply with SDS specification.
